

Second Foundation, Inc.

Joint Product Development

J2EE / JCA Compliant adapter development

responsible for the maintenance / bug-fixing for all the adapters licensed by the customer.

The Customer:

A company specializing in solving one of today's most crucial information technology problems: the challenge of managing, moving and integrating data and information across dissimilar systems for business benefit.

Key Features / Technologies:

The adapters made use of Java/J2EE, EJB, and was deployed on Solaris 7 and Windows NT, and on a host of application servers including WebLogic.

The Need:

Information Logistics Network (ILN) – the company's distributed data movement solution - had a need to communicate with various third party applications via adapters.

The Solution:

Second Foundation had a host of pre-built adapters for its eCRM integration solution which was complementary to ILN.

These J2EE / JCA compliant adapters were integrated with ILN's adapter framework, and licensed to the customer. These adapters provided the JCA-standard Common Client Interface (CCI).
